## Secured night vent TITAN vent secure.

High intruder protection and healthy ventilation are no longer a contradiction in terms. Now there's a completely new way of ensuring a continuous exchange of air for timber, timber-aluminium and PVC windows: the TITAN vent secure night vent. Because with the TITAN vent secure you can leave your window open a crack and still be optimally protected against burglary and driving rain.

TITAN vent secure offers verified, scalable burglar resistance from basic security up to RC2 in both the locked and ventilation positions. The security of burglar resistant windows is maintained despite the 10 mm tilt night vent opening. This way you can ensure a healthy and feel-good climate even when you're not there and prevent mould build-up. The familiar appearance of the window thus remains unchanged. The new secure night vent is particularly well-suited to retrofitting.

Providing fresh air  
in a burglar  
resistant way.

### Benefits for fabricators

- For timber, timber-aluminium and PVC windows
- Implemented using special frame parts, no additional parts required
- Easy to install and hardly any adjustment work is required

### Benefits for end users

- Certified burglar resistance in accordance with RC2, including in the ventilation position
- Safe ventilation – even when you're not there
- Largely resistant to driving rain for air exchange in all weathers
- Guarantees continuous basic ventilation and ensures a pleasant indoor environment
- Prevents mould formation
- Hardly any draughts compared to normal tilted windows
- Intuitive manual operation with the established turn-and-tilt operating sequence
- Prevents the sash from closing in case of a draught
- No visible, unsightly additional parts
- Easy to retrofit
