

SIEGENIA Innovations for you:

PORTAL HS ECO PASS SKY axxent

Your benefits³:

- ❶ Barrier-free thanks to the zero-barrier threshold with perfect sill installation
- ❷ Identical grid design in the threshold and outside area
- ❸ Burglar resistance up to RC3

Our products and solutions bring spaces to life and give people a sense of well-being: www.siegenia.com/en.

Comfort systems

ECO PASS SKY axxent: 0-mm threshold.

With regard to aesthetics and barrier-freedom, this threshold sets standards for timber-aluminium lift and slide elements: ECO PASS SKY axxent combines barrier-free access to the outside with unique design benefits. This is made possible by the optical adaptation of the threshold to the frame material or floor colour with the aid of a doubling into which the running rail is skilfully integrated. The STYLE drain grid design is equally elegant. The design can be continued to the drainage gutter if a Gutjahr gutter is used. Great emphasis is placed on aesthetics because the threshold and outside area are carefully and mutually coordinated. The optional lighting of the passage from the bottom is suitable for even ambitious architectural concepts.

Perfect sill installation

ECO PASS SKY axxent is also convincing in terms of sill installation. The cooperation both with leading drainage and sealing specialists means that the efficient design with sealing plates, sealing wedges and base profiles provides maximum compression and the modern grid system ensures optimum water drainage. As an extension to the ECO PASS threshold programme, the high-end solution is also distinguished by its high level of ease of fabrication. This ranges from its compatibility with other ECO PASS system components and its high degree of preassembly, up to its simple integration in the fabrication processes.

Tested for security

No compromises are made in terms of security because the hardware and the threshold are available in diverse versions with certified burglar resistance up to RC2 and RC3.

Aesthetics and accessibility.

Benefits for fabricators

- Professional sill installation made possible by the perfectly mutually coordinated standard and accessory programme
- Planning principles for the sealing and drainage concept of the planner are provided
- Vertical and horizontal sealing plates for a homogeneous background to the sill installation - no misalignment and uniform primer
- Precisely fitting and rot-resistant floor recess profiles
- Packers for optimum adjustment of the element
- The design is based on the new HS timber 4.0 system with its advantages in compression and burglar resistance
- Available as a zero-hassle COMFORT UNIT package for optimised production

Benefits for end users

- Barrier-free - 0-mm threshold without incline
- Colour design of the threshold can be flexibly adapted to the floor or frame material
- High-quality design is possible due to identical grid design of threshold and outside area
- Different design options can be achieved in the outside area
- Fixed glazing instead of fixed sash maximises the amount of glass and the brightness of the room
- Professional sill installation and drainage system coordinated with the threshold is possible
- Burglar resistance up to RC3

First class functionality.

Cube design covers:
flat, discreet design with
invisible fixing.

The SKY effect: seamless
transition from fixed glazing
into the floor.

ECO PASS axcent: the zero-
barrier threshold with perfect
sill installation. Colour design
of the threshold can be flexibly
adapted to the floor or frame
material.
